

CEO's MESSAGE 2026

Reflecting on a Year of Progress and Validation

As we step into 2026, I'd like to reflect on a year of meaningful progress for SC Solutions and share how these achievements are shaping our next phase of growth.

2025 was a year of validation. We strengthened our technology foundation, deepened key partnerships, and demonstrated the real-world impact of our Earth intelligence solutions. Recognition from Gerab Systems and the award of the Abu Dhabi soil monitoring contract reinforced our ability to deliver trusted, mission-critical insights at scale across regions and industries.

At SC Solutions, innovation is measured by impact. Every project we deliver reflects our commitment to reliability, clarity, and trust — turning complex data into insights that decision-makers can rely on. This progress would not have been possible without the focus, resilience, and dedication of our team, who continue to build a strong foundation for sustainable growth.

Cliff Beek, CEO
SC Solutions

Looking ahead to 2026, our vision is clear: to transform Earth observation data into actionable intelligence that enables confident decision-making across agriculture, land, energy, and environmental systems.

By combining satellite data, advanced analytics, and expert interpretation, we help organisations understand change, assess risk, and act responsibly – without unnecessary complexity.

As demand for reliable Earth intelligence grows, SC Solutions will remain focused on delivering insights that are practical, trusted, and ready to use.

Proven Impact Across Applications

Our work has already delivered measurable outcomes across sectors, including:

81% precision

in satellite-based plant variety identification analyses

Up to 30% reduction

in environmental impact through improved planning and monitoring

79% accuracy

in data-driven land and environmental assessments

Up to 3.5× revenue protection

by supporting plant innovation and risk-informed decisions

KEY SOLUTION AREAS FOR 2026

Agriculture & Crop Intelligence

We support agricultural and agri-tech organisations with satellite-based insights into crop conditions, land use, and seasonal performance. Our analysis highlights growth, moisture stress, and weather-related damage, enabling more resilient planning, stronger risk awareness, and efficient, climate-resilient farming systems.

Plant Variety & Intellectual Property Support

We provide independent, satellite-based analysis to support plant variety identification and plant IP processes. By offering objective, repeatable insights across time and geography, we strengthen evidence bases and support informed decision-making for plant innovation stakeholders.

Soil Monitoring & Land Intelligence

Through advanced data analysis, we deliver scalable soil and land intelligence without reliance on extensive physical sampling. Our insights into soil moisture dynamics, irrigation patterns, drainage behaviour, and land condition trends support efficient resource use, early risk detection, and evidence-based land management.

Energy, Oil & Gas, and Infrastructure

We support energy and infrastructure projects with land suitability analysis, environmental monitoring, and change detection. Our solutions reduce environmental and operational risk while supporting responsible development and confident planning.

Environment & Sustainability Solutions

Our environmental intelligence solutions help organisations monitor land use change, assess ecosystem indicators, and strengthen sustainability reporting. These insights improve transparency, accountability, and long-term environmental strategy.

I-SAT: Enabling Scalable Earth Intelligence

At the core of our offerings is I-SAT, SC Solutions' Cultivation Management Platform, designed to transform complex Earth observation data into clear, actionable insights. The platform enables organisations — even without geospatial expertise — to access and apply Earth intelligence through intuitive, secure, and scalable tools.

Building the Future Together

As we progress through 2026, SC Solutions remains focused on delivering trusted Earth intelligence that supports resilience and informed decision-making. We will continue to build on our foundation, expand our impact, and collaborate with partners committed to responsible innovation.

Thank you for your trust. We look forward to growing together in the year ahead.
